

Hardware

Purchasing or leasing new server equipment or software?
Unsure about how to make the most cost effective decision?

M9 Systems, as a complement to our Outsourcing and Professional Services, can provide you with single-sourcing for the acquisition of hardware. Whatever type of system you need we provide the proper hardware to meet your technology needs from desktops to servers, storage and networking.

We have partnerships with many of the best-known names in the IT industry and as an **Intel® Product Dealer** are able to custom build servers to meet your exact requirements.

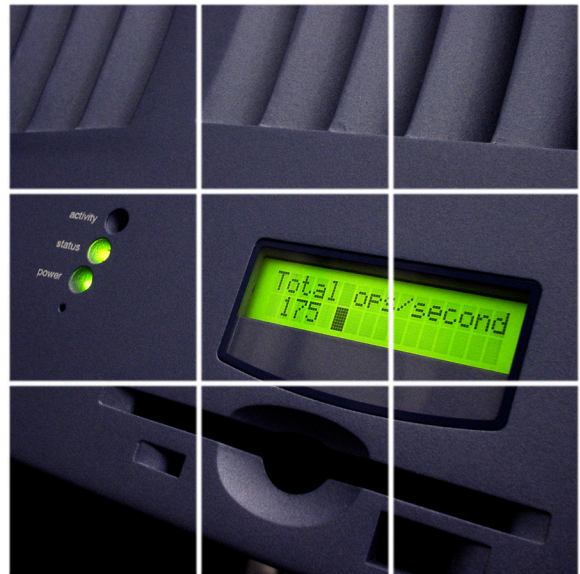

In addition to acquisition, we provide management services for:

- Asset database and physical inventory
- Asset tracking and lifecycle management
- System Configuration (including equipment unpacking, assembly, inspection, and testing).
- Site preparation
- De-installation of old equipment
- Full configuration documentation
- Installing and testing hardware accessories (hard drives, removable media, tape backup units, CD-ROMs, modems, etc.)
- Ensuring connectivity
- Configuration change management
- Preventative maintenance
- Comprehensive after-sales support

Beyond basic hardware provision M9 Systems has established a series of capabilities around outsourced storage management to assist your company navigate the complexities of implementing and maintaining storage facilities.

With years of experience in planning, provisioning, and managing storage systems such as SANs, NAS and network appliances, we can build redundant, high performance, no single point of failure storage solutions that are realistic, secure, and cost effective.

Combined with our [Backup & Restore](#) services this represents another element to a sound [Disaster Recovery](#) plan.

The Benefits:

Ease of procurement
Leverage M9 Systems buying power
Accelerated implementation
Enhanced support
